

Back to Basics

Rural/Limited Water Supply

Have you deployed your drop tanks lately? What is your preferred drafting operation? Do you have a plan in place to supply adequate fire flow?

Often rural fires are on narrow roads, park as close to the edge as possible to allow for adequate access and passing trucks in water shuttle operations

What is the quickest way to empty your tank if your an engine? Have you practiced pumping off your booster tank to a fill tank if necessary

Dump valves on tankers/tenders assist in the quick off load of water, the key is to quickly refill and return to the scene, pre-plan fill sites and send an engine to assist, time is of the essence in the situations
